

CARE AND FEEDING.....

of FISH HOOKS AND CAPTAIN HOOKS.

For your new FISH hook to flourish and operate at its maximum potential, it must be cared for properly. To tie your FISH hook, use a 16" length of 9/16" supertape webbing. Simply tie an overhand knot at the ends of the webbing and then force the loop portion through the hole provided. Voila! Your hook is ready to use.

The CAPTAIN hook is tied with a similar piece of webbing, but 18" long. Put one end of the webbing through the hole and use a water-knot to secure it into a loop. Since the webbing on your Capt. Hook rides against the wall during use, always inspect this area for wear before each use. Be sure to leave ample tails on all your knots, and if you have any questions, give us a jingle.
